

Retrofit

**Retrofit – achieving higher performance by overhauling components.
Profit from KROENERT's retrofit competence.**

Why interrupt proven production processes and risk your competitive advantage?
Give your system an effective makeover instead of replacing it at great expense.

With our Retrofit Service, you receive comprehensive machine modernisation to increase the efficiency, performance and service life of your KROENERT system. You benefit from our decades of experience in modernising electrical and mechanical machine components.

This know-how is irreplaceable when it comes to realising the highest requirements with regard to performance, energy use and economic efficiency or legal specifications and safety requirements.

Exploit potential and save energy costs.

Our experienced retrofit experts are there to help and advise you right from the start. In this way, the economic efficiency or the potential of the planned retrofit measures can already be determined beforehand as part of an engineering contract.

During the modernisation process, special focus is also placed on the energy efficiency of your system. We examine the possibilities of what can contribute to energy saving and then implement the respective measures. This is important, for example, when it comes to meeting legal requirements and reducing emissions.

Good to know: We will always be at your side in every phase of the product life cycle of your machine.

Your benefits:

- Modernisation at manageable costs
- Updated user interface
- Saving energy costs
- Extending the life of the line
- Reducing production costs
- Compliance with legal requirements

Scope of services:

- Replacement of discontinued spare parts
- Conversion in accordance with the latest safety guidelines
- CE certification
- New documentation and digital spare parts catalog
- Latest control and visualisation generation (KROENERT ProLine)
- Integration of maintenance and diagnostic options
- Machine adaptations for new products
